General Notes

Cb Defense (Confer) Sensor 1.0.6.158-1.0.6.161 are releases for the macOS operating system only.

New and Modified Features

This section lists new and modified features in this version of Cb Defense (Confer).

ID	Description
n/a	Improved support for macOS 10.12 "Sierra" (updated whitelist)
n/a	Improved malware protection by detecting process enumeration
n/a	Minor performance improvements

Issues Resolved in this Release

The following section lists corrective content changes made.

ID	Description
CIT-10203/ CIT-10204	Improved reputation reporting. This improved the processing of the "block UNKNOWN application" prevention policy rules, and also resulted in improved malware detection.
CIT-10244	macOS devices could unregister due to an issue with GUID generation. This fix applies to new device registrations and to any devices that were unregistered as a result of the issue.
CIT-10325	A Cb Defense (Confer) component could be incorrectly listed in the Sensor UI as untrusted.
CIT-10224	Malware was not blocked when dropped by the macOS Archive Utility out of a compressed file and executed immediately after the drop.
