

Release Notes: Windows Sensor v6.1.8

September 2018

Summary

Cb Response Windows Sensor v6.1.8 provides bug fixes and stability improvements. This sensor release also includes all changes and fixes from previous releases.

This document provides information for users upgrading to Cb Response Windows Sensor v6.1.8 from previous versions as well as users new to Cb Response. The key information specific to this release is provided in the following major sections:

- **New features** – Describes new features introduced in this release.
- **Corrective content** – Describes issues resolved by this release as well as more general improvements in performance or behavior.
- **Known issues and limitations** – Describes known issues or anomalies in this version that you should be aware of.

Server compatibility

Cb Response sensors included with Cb Response server releases are compatible with all server releases going forward. However, they are incompatible with Cb Response server releases prior to the version they shipped with.

Sensor operating systems

Cb Response sensors interoperate with multiple operating systems. For the most up-to-date list of supported operating systems for Cb Response sensors (and all Carbon Black products), refer to the following location in the Carbon Black User eXchange:

<https://community.carbonblack.com/docs/DOC-7991>

Documentation

This document supplements other Carbon Black documentation. [Click here](#) to search the full library of Cb Response user documentation on the Carbon Black User eXchange.

Technical support

Cb Response server and sensor update releases are covered under the Customer Maintenance Agreement. Technical Support is available to assist with any issues that might develop during the installation or upgrade process. Our Professional Services organization is also available to assist to ensure a smooth and efficient upgrade or installation.

Note: Before performing an upgrade, Carbon Black recommends reviewing content on the User eXchange for the latest information that supplements the information contained in this document.

Corrective Content

This release provides the following corrective content changes:

- Fixed an issue causing high memory consumption by the CbR Windows Sensor on stressed servers. [CB-21640]

Known Issues and Limitations

Known issues associated with this version of the sensor are included below:

- **Disabling DNS Name Resolution For NetConn Events:** Customers have observed that the Windows sensor can report high CPU utilization by the Carbon Black service ('cb.exe') on machines with a continually large number of network connections (e.g. DHCP/DNS servers, Domain Controllers, etc.). To help alleviate the high CPU utilization, without having to disable collection of network connection events, the windows sensor can be configured to disable DNS name resolution in data collection for network connection events by configuring the windows registry key:

```
[HKEY_LOCAL_MACHINE\SOFTWARE\CarbonBlack\config]
```

```
"DisableNetConnNameResolution"=dword:00000001
```

- **FCb Entries Remaining in Add/Remove Programs:** Customers uninstalling their Cb Response Windows sensor through uninst.exe will notice remaining Cb entries in the Add/Remove Programs window.xcz
- **Cb Branding Is Different Between MSI and EXE Installers:** Customers using the Add/Remove Program window to manage their Cb Response installation should be aware that the Cb branding between the MSI and EXE installers is different.
- **Disproportionate Cb Logo on Install Wizard:** Customers running the .exe installer may notice a disproportionate Carbon Black logo appearing on the Install Wizard
- **Install/Uninstall & Upgrade/Downgrade of Sensor on WinXP & WinServer2003 Requires Reboot:** Customers running the Windows sensor on a Windows XP or Windows Server 2003 machine should note that a reboot of the machine will be required for all install/uninstall and upgrade/downgrade methods in order to successfully load and unload Cb drivers.
- **Cb Protection Upgrade Needed:** Customers running Cb Protection to tamper protect the Cb Response Sensor and do not opt-in to CDC will need to update their tamper rule settings for Cb Protection to the latest "Cb Response Tamper Protection" Rapid Config (if running CbP 8.0) or Updater (if running CbP 7.x) in order to successfully upgrade/downgrade their Cb Response sensor. Please contact technical support to obtain the latest Rapid Config or Updater for CbP.

Carbon Black.

Contacting Support

Use one of the following channels to request support or ask support questions:

- **Web:** [User eXchange](#)
- **Email:** support@carbonblack.com
- **Phone:** 877.248.9098
- **Fax:** 617.393.7499

Reporting Problems

When contacting Carbon Black Technical Support, be sure to provide the following required information about your question or issue:

- **Contact:** Your name, company name, telephone number, and email address
- **Product version:** Product name (Cb Response server and sensor version)
- **Hardware configuration:** Hardware configuration of the Cb Response server (processor, memory, and RAM)
- **Document version:** For documentation issues, specify the version and/or date of the manual or document you are using
- **Problem:** Action causing the problem, error message returned, and event log output (as appropriate)
- **Problem severity:** Critical, serious, minor, or enhancement request
