

Carbon Black  
Sudo Commands

15-Mar-2014  
support@bit9.com

## Introduction

The purpose of this document is to list all the commands required to operate Carbon Black utilizing only sudoer rights. The goal is to provide sites in which separation of duties is required between the Carbon Black server administrator and the Linux system administrator.

## Sections

### 1. Commands required:

- service (cb-enterprise, cb-coreservices, cb-pgsq, cb-redis, cb-solr, cb-nginx, cb-datastore, cb-allianceclient, cb-rabbitmq) start|stop|status|restart
