Carbon Black 101 Training Video Library

The Carbon Black 101 Training Video Library was created because sometimes, you don't need a full class - you just need a little information or a refresher. The Library contains free, short videos on basic features to provide a baseline understanding. Consider sharing these videos with those in your organization who need only an executive-level understanding or those in your day-to-day operations who are interested in how Carbon Black products are monitoring and protecting your environment.

Log into the User eXchange (community.carbonblack.com) and join the Training Group to access the Carbon Black 101 Training Video Library. While you're there, check out the other training resources available.

Cb Enterprise Protection 101 Videos

Benefits / Architecture & Workflow / File Hashing - (11:23)

- See an overview of how Carbon Black Enterprise Protection provides Visibility, Detection, Response, Protection and Integration capabilities and gain an understanding of system architecture, workflow, and file hashing.

Cb Enterprise Protection Console - (8:01)

- Discover what the Cb Enterprise Protection Console is and how to navigate the console to view pages of information on your environment and the files and file activity within your environment.

Policies / Removable Device Control / Notifiers - (9:53)

- See how you can organize your endpoints into groupings called Policies based on custom security requirements and control what files from Removable Devices can do in your environment. See too, how the system notifies end users to when it needs to intervene.

Computer Details - (5:23)

- Learn how to see detailed information on end points in your environment.

File Visibility - (7:59)

- Learn how to see detailed information on monitored files in your environment.

Events / Meters & Alerts - (9:50)

- Discover how to see real–time activities within your environment and learn of the execution and activities of files in your environment.

Baseline Drift - (11:52)

- See how you can discover file number changes in your environment and the risk analyses related to those changes.

Software Approvals - (6:25)

- Learn of the different pieces of functionality available to approve known good files in your environment.
