THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

Carbon Black, Inc. acknowledges the use of the following third-party software in the Carbon Black Protection product:

Portions of this software created by gSOAP are Copyright © 2001-2004 Robert A. van Engelen, Genivia inc. All Rights Reserved. See **Note 1** below for additional details.

This product includes PHP, freely available from <http://www.php.net>. Copyright © 1999 - 2015 The PHP Group, All rights reserved. See **Note 1** below for additional details.

Portions of this software use Info-ZIP, copyright (c) 1990-2007 Info-ZIP. All rights reserved. For the purposes of this copyright and license, "Info-ZIP" is defined as the following set of individuals: Mark Adler, John Bush, Karl Davis, Harald Denker, Jean-Michel Dubois, Jean-loup Gailly, Hunter Goatley, Ed Gordon, Ian Gorman, Chris Herborth, Dirk Haase, Greg Hartwig, Robert Heath, Jonathan Hudson, Paul Kienitz, David Kirschbaum, Johnny Lee, Onno van der Linden, Igor Mandrichenko, Steve P. Miller, Sergio Monesi, Keith Owens, George Petrov, Greg Roelofs, Kai Uwe Rommel, Steve Salisbury, Dave Smith, Steven M. Schweda, Christian Spieler, Cosmin Truta, Antoine Verheijen, Paul von Behren, Rich Wales, Mike White. This software is provided "as is," without warranty of any kind, express or implied. In no event shall Info-ZIP or its contributors be held liable for any direct, indirect, incidental, special or consequential damages arising out of the use of or inability to use this software. Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the above disclaimer and the following restrictions: 1. Redistributions of source code (in whole or in part) must retain the above copyright notice, definition, disclaimer, and this list of conditions. 2. Redistributions in binary form (compiled executables and libraries) must reproduce the above copyright notice, definition, disclaimer, and this list of conditions in documentation and/or other materials provided with the distribution. The sole exception to this condition is redistribution of a standard UnZipSFX binary (including SFXWiz) as part of a self-extracting archive; that is permitted without inclusion of this license, as long as the normal SFX banner has not been removed from the binary or disabled. 3. Altered versions--including, but not limited to, ports to new operating systems, existing ports with new graphical interfaces, versions with modified or added functionality, and dynamic, shared, or static library versions not from Info-ZIP--must be plainly marked as such and must not be misrepresented as being the original source or, if binaries, compiled from the original source. Such altered versions also must not be misrepresented as being Info-ZIP releases--including, but not limited to, labeling of the altered versions with the names "Info-ZIP" (or any variation thereof, including, but not limited to, different capitalizations), "Pocket UnZip," "WiZ" or "MacZip" without the explicit permission of Info-ZIP. Such altered versions are further prohibited from misrepresentative use of the Zip-Bugs or Info-ZIP e-mail addresses or the Info-ZIP URL(s), such as to imply Info-ZIP will provide support for the altered versions. 4. Info-ZIP retains the right to use the names "Info-ZIP," "Zip," "UnZip," "UnZipSFX," "WiZ," "Pocket UnZip," "Pocket Zip," and "MacZip" for its own source and binary releases.

# Introduction

---

This document describes the events generated, tracked, and stored by CB Protection, and the ways you can access these events.

Section 1, Event Specification, describes the content, structure and purpose of these events for the benefit of integrators interested in using them outside of the CB Protection environment. This section includes a comprehensive list of event subtypes and their descriptions.

Section 2, Access to CB Protection Event Data, describes the ways you can access CB Protection event data outside of the CB Protection Console user interface. For supported syslog formats, this section shows how event data is mapped.

CB Protection events provide a critical set of audit data required by many organizations for compliance, legal, and reporting purposes. Among other things, they can show you:

- who is using CB Protection
- what CB Protection Server configuration changes have been made
- conditions requiring action (e.g., low disk space or database issues)

For computers running the CB Protection Agent, events provide information such as:

- file executions that have been blocked due to security rules
- malicious files found by CB Protection or connected third-party security devices
- new devices found

The CB Protection API allows programmers who want to write code to interact with CB Protection using custom scripts or from other applications. As with actions performed through the CB Protection Console, CB Protection API activity creates an audit trail. The API user taking the action is identified in the event.

Depending on your role and use case, how you use these events will vary. For example:

- A Help Desk responding to an end user request might be interested in all *block* events for a given computer.
- An IT security specialist responding to an incident might be interested in *new file executions* and events related to *file installation groups*.
- A CB Protection administrator establishing corporate policies might be interested in classes of events specific to a particular policy interest, such as discovery of new devices or execution of unapproved files (i.e., files neither approved nor banned).

The descriptions in this document will help you locate the specific events you need and filter out those not of interest. If you need more information about CB Protection features associated with these events, see the *Using CB Protection* guide for this release, which is available as a PDF file on the Carbon Black [User eXchange](#) and in online help on the CB Protection Console.

**Note:** The main table of event types and subtypes in [Table 3](#) describes events as they appear in current versions of CB Protection v8.1.10.

# Section 1: Event Specification

---

There are two key elements in the CB Protection event specification:

- the **event fields**, that is, the different types of information available in a single event
- the list of unique **event type/subtype** combinations, shown in [Table 3](#) beginning on page 13.

## Event Fields

---

This section describes the fields that can be in a CB Protection event. Those shown as “required” can be expected to be present in each CB Protection event. Other fields are present only for certain events or under certain conditions.

### ***Timestamp (required)***

---

All event timestamps are stored in UTC in the CB Protection database. The timestamp is the date/time at which the event occurs; that is, it is the time as seen from the source of the event. For example, for server-generated events, it is the UTC time of the server; for agent-generated events, it is the UTC time on the agent computer reporting the event. In the CB Protection Console, timestamps are displayed according to the time zone setting selected on the General tab of the System Configuration page.

The timestamp for an event corresponds to the date/time when the *CB Protection Agent or Server* records the event. This means, for example, that a new file discovery during initialization of all files on a new agent computer will show the time the file is first seen by the agent, not when it first arrived on the computer. If the time on the agent computer is not the same as the time on the server, an agent could report a skewed time, including reporting events as happening at a future time.

**Note:** Although not part of the basic and enhanced Syslog output, a *received* timestamp may appear in other event output from CB Protection, showing the time the CB Protection Server received an event.

### ***Type (required)***

---

This is the top-level, general classification for an event. Each event also has a subtype, which specifically classifies the kind of event it is. [Table 1](#) shows the public event types.

**Table 1. CB Protection Event Types**

| Event Type          | Description  |
|---------------------|--|
| Computer Management | <p>Events related to changes to Computer assets managed by the CB Protection Server or specific to a CB Protection Agent. For example:</p> <ul style="list-style-type: none"> <li>- Console management operations like “Computer deleted” and “Computer modified”</li> <li>- Computer/Agent specific diagnostic actions like “Cache check complete” and “Agent synchronization finished”</li> <li>- Template and clone computer management operations</li> <li>- Agent status operations like “Agent restart” and “Agent upgraded”</li> <li>- “CB Response sensor status”</li> </ul> |

| Event Type         | Description  |
|--------------------|--|
| Discovery          | <p>Events related to the discovery or existence of new assets or new actions. For example:</p> <ul style="list-style-type: none"> <li>- Device-related events like “New device found” and “Device attached”</li> <li>- File-related events like “First execution on network” and “New unapproved file to computer”</li> <li>- Events directly related to the metadata retrieved from the CB Collective Defense Cloud, Carbon Black’s database of file information. For example, “Malicious file detected” and “Potential risk file detected”</li> <li>- Events related to notification of malicious or potentially risky files from external sources.</li> </ul>   |
| General Management | <p>Events related to the management of non-user, non-computer and non-policy assets. This includes events related to Meters, Alerts, Baseline Drift reports, Snapshots, and Event Rules. For example, “Alert triggered”, “Baseline Drift Report generated”</p>   |
| Policy Enforcement | <p>Events related to the enforcement of any policy or rule on the CB Protection Agent. For example:</p> <ul style="list-style-type: none"> <li>- File events like “File approved (Updater)”, “Execution block (banned file)”, and “Report write (Custom Rule)”</li> <li>- Device Rule events like “Read block (removable media)” and “Report execution (removable media)”</li> <li>- Registry Rule events like “Write block (Registry Rule)” and “Report write (Registry Rule)”</li> <li>- Memory Rule events like “Access prompt (Memory Rule)” and “Access block (Memory Rule)”</li> </ul> <p><b>Note:</b> This does <i>not</i> include the creation or management of policies. Those events are included under the <i>Policy Management</i> type.</p> |
| Policy Management  | <p>Events related to the management (creation, modification, deletion) of any policy or rule. For example:</p> <ul style="list-style-type: none"> <li>- Policy events like “Policy created” and “Policy deleted”</li> <li>- Software rule events like “Publisher approval created”, “File ban created”, “Trusted User added” and “Custom Rule created”</li> <li>- Device Rule events like “Device approval removed”</li> <li>- Registry Rule events like “Registry Rule created”</li> <li>- Memory Rule events like “Memory Rule modified”</li> </ul>  |
| Server Management  | <p>Events related to the configuration and administration of the CB Protection Server and database. For example:</p> <ul style="list-style-type: none"> <li>- “Server shutdown”, “License added”, “Server backup stopped”, “Database error” and “Cb Collective Defense Cloud connection lost”</li> </ul>   |
| Session Management | <p>Events related to the login activity and management of CB Protection Console users. For example:</p> <ul style="list-style-type: none"> <li>- Management events like “Console user created”</li> <li>- Login activity like “Console user login” and “Console user logout”</li> </ul> <p><b>Note:</b> CB Protection Console is the web-based user interface to the CB Protection Server through which all standard CB Protection administration takes place.</p>   |

**Subtype (required)**

---

The subtype corresponds to one (and only one) event type. Subtypes generally map closely to real world use cases and/or CB Protection product functionality. [Table 3](#) shows the full list of subtypes.

**Severity (required)**

---

Each CB Protection event has one of five different severity values. [Table 2](#) shows the severity values listed in order of ascending importance. Note that prior to v7.2.1, this field was called “Priority”.

**Table 2. CB Protection Event Severities**

| Severity     | Description  |
|--------------|--|
| 6 - Info     | Informational message  |
| 5 - Notice   | Normal, but significant, condition   |
| 4 - Warning  | Warning condition; worth investigation   |
| 3 - Error    | Error condition, usually something that requires contact with Carbon Black Support |
| 2 - Critical | Critical condition that requires immediate investigation or action                 |

**Description (required)**

---

The description field is a natural language description of the event. Often, the description will contain information also provided in other fields in the event. This redundancy is intentional; it allows the description to be fully descriptive of the event without the other fields.

[Table 3](#) includes examples (or formats) of descriptions for each unique event subtype, but it does not enumerate all possible event descriptions. Where descriptions contain error messages and other unrestricted content, an exhaustive list is impractical.

**Note:** Because it can contain sensitive information, including passwords, command line information is included in the Description field for Syslog output from the CB Protection Server only if command line export is enabled on the System Configuration/Events page in the CB Protection Console.

**Source (required)**

---

There are two possible values for Source: “System” (the CB Protection Server or a server component) or a computer name (indicating the event came from a CB Protection Agent on the named computer).

**Unified Server Source**

---

This release includes the ability to manage certain functions on multiple CB Protection servers from one server. If an event was initiated by a remote server connected via Unified Management, the Unified Server Source field shows the name of that server.

**Note:** On the console Events page, this field (if available) is displayed only if the logged in user has Unified Management permissions.

## IP Address

---

The IP Address field denotes the IP address of the source of the event. Most, but not all, events have an IP address. For most events, the IP address corresponds to the “Source” field, which is the IP address of the client computer for CB Protection Agent generated events. This is the IP address of the agent *at the time of the event*, not necessarily the current IP address of the agent.

Events generated by CB Protection Console activities report the IP address of the machine on which the user is accessing the console. For example, “Console user login” and some “File approval created” events contain the IP address of the computer on which a console user performed those actions.

Most events generated by the CB Protection Server, Reporter and the database itself (whose source is “System”) do not have an IP address. This includes, for example, events such as “Alert triggered” and “Server errors”. In those cases, the IP address is unnecessary, since it is always the same. Exceptions to this rule are Server and Reporter start and stop events, which contain IP address of the Server and Reporter for diagnostics purposes.

## User

---

The User field contains either the user that was active on the agent computer (Source) at the time of the event, or the Console User in the case of events generated by console activities. There are cases in which an event cannot be attributed to either a console or a logged in user on an agent system:

- In some cases, the user name will be “System”.
- The User field might be empty when there is no user account to attribute to the event. This occurs for agent-generated Computer Management events like “Agent restart” and “Agent Policy updated”. Those events are initiated by the CB Protection Agent itself and therefore have no associated user.
- In some cases, the User field will be “<unknown>” because a user cannot be determined. For example, it would be <unknown> for the Discovery events “Device attached” and “Device detached”. When devices are attached or detached from a computer, CB Protection tries to determine which user is currently “active” at that time. If an active user cannot be determined – for example, if there is no one currently logged in – CB Protection will use the special string “<unknown>” for User.

If you are using Unified Management of multiple servers, the “user” identified for actions performed on client servers through the management server is not necessarily the user currently logged into the console. The account used to *authenticate* the connection between the management server and the client server appears as the user.

## File Hash, File Name, File Path, File Trust, and File Threat

---

When the event relates to a specific file (e.g., “Execution blocked”, “New unapproved file”), the File Hash, File Name, and File Path fields will be completed with the file-specific information that is available. Not all file events will have these fields completed. For example, an “Execution blocked (still analyzing)” event, will not have a file hash. Policy Management events, like creating approvals and bans, also contain File Hash or File Name data when available and applicable.

When the File Hash is available, it is a SHA-256 hash. The File Path does *not* end with a trailing slash.

If CB Collective Defense Cloud data is enabled when the file event is generated, File Trust and File Threat information is included in the event if it is available.

## ***Process Name, Process Path, Process Key, Process Trust, and Process Threat***

---

Several Process fields are used within events generated by the CB Protection Agent. Most of them are similar to the File fields, except that they describe the running process that caused an event to be generated rather than the file that is the target of an action. For example, when a file execution is blocked and the “Execution block” event is generated, the event will include the Process Name field with the file name of the program that tried to launch the blocked file.

Typically, the process fields appears in Discovery events or Policy Enforcement events but also can be part of certain subtypes of other event types.

If CB Collective Defense Cloud data is enabled when the file event is generated, Process Trust and Process Threat information is included in the event if it is available.

Process Key is a unique, proprietary key identifying the instance of the process on a specific computer.

**Note:** A “Process” field (without any additional term) is also in events exported to Syslog and archives. This field contains the name and full path, and is used for compatibility with pre-7.2.0 agents and events. Another field, Process Hash, is exported only in archived events (see [Archive Files](#) on page 49).

## ***Installer, Root Hash***

---

Installer and Root Hash are used within some events generated by the CB Protection Agent.

The Installer field contains the name (*not* the path) of the file that *created* the file referenced by a File Name and/or File Hash – in other words, the root parent or “installer” of that file.

In many cases, the Installer is the same as the Process Name, but not always. For example, for file approval events, the process running is often (by definition) the same as the installer that is approving the file being written. In the case of execution block events, the process running may or may not be the same as the process that wrote the file in the first place.

For example, consider what happens when the installer *setup123.exe* writes the file *myapp.exe*. When *myapp.exe* is first written on a computer running a CB Protection Agent, a “New file on network” event is generated, and both its *Process Name* field and its *Installer* field reference *setup123.exe*. If *myapp.exe* is later launched from a command prompt and is blocked, the Process Name field may be *cmd.exe* while the Installer field is still *setup123.exe*.

The Root Hash field is the SHA-256 hash value of the Installer file.

## ***Policy***

---

The Policy field is used within events generated by the CB Protection Agent. It contains the name of the CB Protection security policy in effect on the agent at the time of the event.

## ***Additional Fields***

---

The following additional fields are not mandatory but may appear in events:

- **Computer ID** – A numeric ID for the computer associated with the event (0 for system). Increments by one for each computer registered with the server.
- **Ban Name** – For block events, name of the ban that blocked the file.
- **Config List Version** – Version number of the Config List associated with an event. The Config List is the set of rules delivered to agents.
- **Date Received** – Timestamp when the event was received by the CB Protection Server (in UTC).

- **File Prevalence** – Number of computers on which the file associated with an event appears.
- **File State** – Global state of the file associated with the event (Approved/Unapproved/Banned).
- **File State Reason** – Additional details behind the global state of the file associated with the event.
- **Indicator Name** – Name of the threat indicator associated with the event, if present. Same as rule name when present.
- **Indicator Set** – Name of the threat indicator set for the indicator associated with the event, if present.
- **Platform** – Platform of the computer associated with the event (Windows, Mac, Linux).
- **Process** – Full path and name of the process associated with the event.
- **Process Prevalence** – The number of computers that have the process associated with an event.
- **Rapid Config** – The name of the Rapid Config associated with the event, if any.
- **Rule Name** – The name (as it appears in the console) of the rule associated with the event. This includes both user-created rules and built-in rules, such as *Prompt on unapproved executables*.
- **Unified Source** – The name of the unified server associated with the event, if any.
- **Updater** – The name of the updater associated with the event, if any.

## Events Table

[Table 3](#) lists all events types and their unique subtypes in CB Protection v8.1.10. New or changed events are shown with the following legend:

- ◎ New for v8.1.8; type and subtype shown in bold
- New for v8.1.6; type and subtype shown in bold
- Changed for v8.1.6 (e.g., type, subtype, severity, description, triggering condition); type and subtype shown in bold
- New for v8.1.4; type and subtype shown in bold
- Changed for v8.1.4 (e.g., type, subtype, severity, description, triggering condition); type and subtype shown in bold
- ▲ New for v8.1.0; type and subtype shown in bold
- △ Changed for v8.1.0 (e.g., type, subtype, severity, description, triggering condition); type and subtype shown in bold
- ✦ New for v8.0.0
- ◇ Changed for v8.0.0

For information about event changes prior to v8.0.0, see the [Bit9 Security Platform v7.2.3 Events Integration Guide](#) on the Carbon Black [User eXchange](#).

In the Example Descriptions/Comments column, the descriptions show the text and/or format of the descriptions for each event. Variable information is shown with the convention “\$variabledata\$”. So for example, where the actual Description field for an event would show the name of a computer (e.g., “Laptop-5”), the Description column in this table shows “\$computer\$”. Variables that use parameters from CB Protection, where these parameters are not commonly known objects outside of the CB Protection context, are shown in the format “\$param1\$”, “\$param2\$”, etc. You can view the actual event output from CB Protection or view the Events page through the CB Protection Console to see real-world examples of these parameters. For example, an event shown in this guide as “Computer \$computer\$ discovered new file '\$filePathAndName\$' [\$hash\$].” might look like this in the console:

| Subtype                         | Description  |
|---------------------------------|--|
| New unapproved file to computer | Computer MYCORP\LT-5 discovered new file 'c:\windows\system32\custom' [30374...56D8D]. |

If you have upgraded from a previous version of this product (especially pre-8.0), note the following changes that affect multiple events:

- Several product name changes in version 8 have affected certain event subtypes and descriptions:
  - Parity Server/Bit9 Server is now CB Protection Server.
  - Parity Agent/Bit9 Agent is now CB Protection Agent.
  - Parity Console/Bit9 Console is now CB Protection Console.
  - Parity Knowledge Service/Bit9 Software Reputation Service is now CB Collective Defense Cloud.
- Numerous other changes, including some user interface names, have been made since the 7.x product cycles.
- Beginning with v7.2.1, what was labeled “Priority” was changed to “Severity”.
- In v8.1.0, capitalization of many subtype names was changed for consistency.

**Table 3. CB Protection 8.1.10 Event Types and Subtypes**

| Type                | Subtype                           | ID No. | Severity | Example Descriptions/Comments   |
|---------------------|-----------------------------------|--------|----------|---|
| Computer Management | Agent bulk state change finished  | 412    | Info     | Computer '\$computer\$' completed the state transition of all files from '\$param1\$' to '\$param2\$'.<br><b>Note:</b> Parameters 1 and 2 can be 'Unapproved' or 'Locally Approved'.  |
| Computer Management | Agent bulk state change requested | 413    | Info     | '\$userName\$' requested state transition of all files on computer '\$computer\$' from '\$param1\$' to '\$param2\$'. Parameters 1 and 2 can be 'Unapproved' or 'Locally Approved'.  |
| Computer Management | Agent config modified             | 435    | Notice   | Agent configuration property '\$param1\$' was created as '\$param2\$' (\$param3\$) by '\$username\$'.<br>Agent configuration property '\$param1\$' was modified to '\$param2\$' (\$param3\$) by '\$username\$'.<br>Agent configuration property '\$param1\$', value '\$param2\$' (\$param3\$) was deleted by '\$username\$'.<br><b>Examples:</b><br>Computer retrieved Notifier Logo: Source[\$param1\$] Attempts[\$param2\$].<br>Agent configuration property 'KernelWriteExcludePattern' was modified to '/opt/apps/*' (Enabled) by 'bjones@mycorp.local'.<br>Agent configuration property 'protocol_message_versions (Linux)' was modified to 'protocol_message_versions=1:4,2:1,3:1,5:4,6:7,7:5,8:3,9:4,10:1,11:1,12:2,13:1,14:1,15:2,16:1,18:1' (Disabled) by 'rgomez@mycorp.local'. |
| Computer Management | Agent database error              | 432    | Error    | Cb Protection Agent had to restore its primary database cache.<br>Cb Protection Agent had to rebuild its primary database cache and now has to re-initialize.<br>Cb Protection Agent detected a cache integrity problem.<br>Unknown error initializing database pool.<br>Cb Protection Agent had to restore its primary database cache.<br>Cb Protection Agent had to rebuild its primary database cache and now has to re-initialize.<br>Cb Protection Agent failed to upgrade its database.<br>Cb Protection Agent failed to connect to its cache database.<br>Cb Protection Agent failed to read config list from file.<br>Cb Protection Agent failed cache verification.  |
| Computer Management | Agent deleted events              | 414    | Notice   | Computer '\$computer\$' deleted \$param1\$ events.<br><b>Note:</b> Param1 is a numeric value.   |
| Computer Management | Agent Enforcement Level changed   | 407    | Notice   | Computer '\$computer\$' changed Enforcement Level from '\$param1\$' to '\$param2\$'.<br><b>Note:</b> Parameters 1 and 2 are one of the Enforcement Levels or "Local Approval".  |

|        | Type                | Subtype                             | ID No. | Severity                   | Example Descriptions/Comments   |
|--------|---------------------|-------------------------------------|--------|----------------------------|---|
|        | Computer Management | Agent error                         | 431    | Error                      | Unsupported kernel [\$kernelversion\$] running. Agent will not track files.<br>Cb Protection Agent was unable to communicate with the kernel. Agent may be unprotected<br>Unable to connect to the Kernel. Agent will not track files.<br>Computer failed to receive Notifier Logo: \$logoFilePath\$.<br>Free space on Cb Protection Agent drive is low: Drive[\$letter\$:] Available[\$param1\$]<br>Total[\$param2\$] Free[\$param3\$] Threshold[\$param4\$]<br>Upload failed: Retry limit exceeded. File upload canceled for file '\$filePath\$'. Attempts[\$param\$] |
| ▲      | Computer Management | Agent FIPS status changed           | 851    | Info                       | FIPS status has changed on computer '\$computer\$' from '\$param1\$' to '\$param2\$'.   |
|        | Computer Management | Agent health check                  | 447    | Info/<br>Error/<br>Warning | Cb Protection Agent is healthy. Options[\$param1\$].<br>Cb Protection Agent failed a health check. ErrorsFound[\$param2\$] Options[\$param1\$]<br>Cb Protection Agent detected a problem: \$param1\$. \$param2\$<br>Timestamp of events from computer \$computer\$ are \$param1\$ day(s) in the \$param2\$<br>Timestamp of events from computer \$computer\$ are within expected range  |
|        | Computer Management | Agent health check request          | 457    | Info                       | User '\$userName\$' requested health check for computer '\$computer\$'.   |
| Δ<br>+ | Computer Management | Agent notification (other)          | 1019   | Info                       | Service control notification on '\$computer\$': \$param1\$.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.   |
| Δ<br>+ | Computer Management | Agent notification (session change) | 1018   | Info                       | Session change on '\$computer\$': \$param1\$.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.   |
| Δ<br>+ | Computer Management | Agent notification (time change)    | 1017   | Info                       | System time change on '\$computer\$': \$param1\$.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.   |
| ○<br>Δ | Computer Management | Agent Policy changed                | 406    | Notice                     | Policy change was scheduled for computer '\$computer\$' from '\$param1\$' to '\$param2\$'.<br><b>Change Note:</b> Subtype capitalization was changed in v8.1.0. Description was changed in v8.1.4.  |
| Δ      | Computer Management | Agent Policy updated                | 408    | Info                       | Computer '\$computer\$' updated Policy from version '\$param1\$' to '\$param2\$'.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.   |
|        | Computer Management | Agent requires upgrade              | 415    | Notice                     | Agent polled from '\$ipaddress\$'. Agent Version(\$param1\$). Agent needs to upgrade to latest version.   |
|        | Computer Management | Agent restart                       | 405    | Info                       | Cb Protection Agent has started, version \$param1\$.  |
|        | Computer Management | Agent shutdown                      | 404    | Info                       | Cb Protection Agent was stopped because of a system shutdown.   |
|        | Computer Management | Agent synchronization finished      | 411    | Info                       | Computer '\$computer\$' finished resynchronizing its local state with the Cb Protection Server.<br>(Reason: '\$param1\$').<br><b>Note:</b> Param1 is one of the following: 'Agent queue size grew too large', 'Server request during agent initialization was deferred', 'Server request during agent cache consistency scan was deferred', 'Server request', 'Agent did not have enough history', 'Protocol error', 'Agent CLI Request'  |
|        | Computer Management | Agent synchronization requested     | 418    | Info                       | User '\$username\$' has requested resynchronization of computer '\$computer\$' with the Cb Protection Server.   |
|        | Computer Management | Agent synchronization started       | 410    | Info                       | Computer '\$computer\$' started resynchronizing its local state with the Cb Protection Server<br>(Reason: \$param2\$).  |
|        | Computer Management | Agent uninstalled                   | 421    | Notice                     | Agent has been uninstalled from computer '\$computer\$'   |
|        | Computer Management | Agent upgraded                      | 409    | Info                       | Computer '\$computer\$' changed agent version from '\$param1\$' to '\$param2\$'.  |
|        | Computer Management | Automatic resynchronization         | 425    | Info                       | Cb Protection Server scheduled an auto resync on '\$computer\$' because agent appears to have gone back in time (\$param1\$/ \$param2\$).   |

|   | Type                | Subtype                         | ID No. | Severity | Example Descriptions/Comments  |
|---|---------------------|---------------------------------|--------|----------|--|
|   |                     |                                 |        |          | <b>Note:</b> Param1 is the server's expected sequence number of an action. Param2 is the sequence number sent by the agent, which can be used for diagnostic purposes with Carbon Black Support.   |
|   | Computer Management | Cache check complete            | 416    | Info     | Cache consistency check stopped Level {\$param1\$} {\$param2\$}<br>Cache consistency check complete: {\$param1\$} optimizations made, {\$param2\$} corrections.<br><b>Note:</b> Param1 is cache consistency level. Param2 is a series of values for diagnosis of what was done during the check, and also indicates whether the check ran to completion ("Successful[1]") or stopped before completion ("Successful[0]").  |
|   | Computer Management | Cache check error               | 417    | Warning  | Cache consistency error number '{\$param1\$}', file '{\$param2\$}'.  |
|   | Computer Management | Cache check start               | 426    | Info     | Cache consistency check at level '{\$param1\$}', flags '{\$param2\$}' started.   |
|   | Computer Management | Cache consistency check request | 453    | Info     | User '{\$userName\$}' requested a cache consistency check Level[{\$param1\$}] Options[{\$param2\$}] for computer '{\$computer\$}'<br><b>Note:</b> Param1 is the consistency check level chosen by the user and param2 indicates any option checkboxes chosen, such as "Full scan of new files".  |
| ◇ | Computer Management | Cb Response sensor status       | 458    | Info     | Cb Response Sensor Version '{\$param1\$}' installed and '{\$param2\$}'.<br>Cb Response Sensor is not installed.<br><b>Note:</b> param1 is the Cb Response sensor version; param2 is the sensor state (e.g., 'Running').<br><b>Change Note:</b> Prior to v8.0.0, the event subtype was "Carbon Black sensor status".  |
|   | Computer Management | CLI executed                    | 429    | Notice   | The CLI command "{\$commandname\$}" was executed.  |
|   | Computer Management | CLI password reset              | 403    | Notice   | The CLI password for computer '{\$computer\$}' was reset by '{\$username\$}'.  |
|   | Computer Management | Clone orphaned                  | 446    | Info     | Clone computer '{\$computer\$}' was orphaned due to deletion of template '{\$param1\$}'.   |
|   | Computer Management | Clone registered                | 445    | Info     | Computer '{\$computer\$}' was registered as a clone of template '{\$param1\$}'.  |
|   | Computer Management | Computer added                  | 400    | Info     | New computer '{\$computer\$}' with Policy '{\$policyName\$}' registered from '{\$ipAddress\$}'. Agent Version ({\$param1\$}).  |
|   | Computer Management | Computer deleted                | 401    | Info     | Computer '{\$computer\$}' was deleted by '{\$username\$}'.   |
|   | Computer Management | Computer modified               | 402    | Info     | Computer '{\$computer\$}' was modified by '{\$username\$}'.<br>Computer '{\$computer\$}' was moved into the Policy '{\$policyName\$}' by '{\$username\$}'.<br>Computer '{\$computer\$}' was modified by '{\$username\$}' to use automatic Policy assignment.<br>Computer '{\$computer\$}' was restored to its previous Policy by '{\$username\$}'.<br>Computer '{\$computer\$}' was scheduled for re-registration by '{\$username\$}'.<br>Duplicate computer '{\$computer\$}' with address '{\$param1\$}' was re-registered.<br>Computer from '{\$param1\$}' changed its name from '{\$param2\$}' to '{\$param3\$}'.<br>Agent upgrade for computer '{\$computer\$}' was requested by '{\$username\$}'. |
|   | Computer Management | Computer reboot request         | 441    | Info     | User '{\$username\$}' requested reboot of computer '{\$computer\$}'.   |
| ✦ | Computer Management | Computer registered             | 459    | Info     | Computer '{\$computer\$}' registered with the server. {\$param1\$} users are currently logged-in to the computer.  |
|   | Computer Management | Configuration changed           | 434    | Info     | Disk configuration change detected: {\$param1\$} volumes added; {\$param2\$} volumes removed.  |
|   | Computer Management | Configure agent dumps           | 452    | Info     | User '{\$userName\$}' changed agent dump configuration from {\$param1\$} to {\$param2\$} for computer '{\$computer\$}'.  |
|   | Computer Management | Debug level set                 | 451    | Info     | User '{\$userName\$}' set debug level for computer '{\$computer\$}' from '{\$param1\$}' to '{\$param2\$}' for {\$param3\$} minutes.  |

|   | Type                | Subtype                                  | ID No. | Severity | Example Descriptions/Comments  |
|---|---------------------|--|--------|----------|--|
| D | Computer Management | Diagnostic file deletion request         | 454    | Info     | User '\$userName\$' requested deletion of diagnostic files from computer '\$computer\$'.<br><b>Change Note:</b> Prior to v8.1.0 this subtype was "File deletion request".  |
|   | Computer Management | Duplicate computer registration          | 433    | Warning  | Error registering computer '\$computer\$' from \$ipaddress\$ [\$param1\$]: unique agent id duplicates that of computer \$param2\$ from \$param3\$.   |
| ▲ | Computer Management | File deleted                             | 460    | Info     | File 'test123.bat' [FBAD9...34F00] was successfully deleted from MYCORP\LAPTOP3  |

| Δ | Policy Enforcement | Access block (Memory Rule)                     | 830    | Notice   | Access to process '\$filePathAndName\$' was restricted - Requested[\$param1\$] Restricted[\$param2\$].<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.  |
| Δ | Policy Enforcement | Access prompt (Memory Rule)                    | 831    | Info     | Access to process '\$filePathAndName\$' was granted because of a Memory Rule user response. Access to process '\$filePathAndName\$' was restricted because of a Memory Rule user response.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.  |
| Δ | Policy Enforcement | Banned process discovered                      | 847    | Warning  | The Cb Protection Agent discovered a banned process '\$pathname\$\$pathSeparator\$\$filename\$' [\$hash\$] that ran during system startup. \$param1\$<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.   |
| ◇ | Policy Enforcement | Cb Response Watchlist                          | 842    | Notice   | <b>If Process watchlist and file are known to CB Protection:</b><br>Cb Response process watchlist '\$ruleName\$' hit for process '\$process\$' [\$hash\$] on computer '\$computer\$'.<br>Cb Response watchlist '\$watchlist\$' detected file '\$filePathAndName\$' [\$hash\$] on computer '\$computer\$'.<br><b>If Process watchlist and file are unknown to CB Protection:</b><br>Cb Response process watchlist '\$ruleName\$' hit for unknown process '\$process\$' [\$processhash\$] on computer '\$computer\$'.<br>Cb Response watchlist '\$watchlist\$' detected unknown file '\$filePathAndName\$' [\$hash\$] on computer '\$computer\$'.<br><i>(continued on next page)</i><br><i>(continued from previous page)</i><br><b>If Binary watchlist and file are known to CB Protection:</b><br>Cb Response binary watchlist '\$ruleName\$' detected file '\$filePathAndName\$' [\$hash\$].<br><b>If Binary watchlist and file is unknown to CB Protection:</b><br>Cb Response binary watchlist '\$ruleName\$' detected unknown file '\$filePathAndName\$' [\$hash\$].<br><b>Change Note:</b> Prior to v8.0.0, "Cb Response" in the subtype and descriptions was "Carbon Black". Capitalization of the subtype changed in v8.1.0. |
|   | Policy Enforcement | Execution allowed (file loaded before kernel)  | 843    | Warning  | The \$param1\$ file '\$pathname\$\$pathSeparator\$\$filename\$' [\$hash\$] executed before the Cb Protection Agent was running. \$param2\$  |
|   | Policy Enforcement | Execution allowed (file loaded before service) | 844    | Warning  | The \$param1\$ file '\$pathname\$\$pathSeparator\$\$filename\$' [\$hash\$] executed before the Cb Protection Agent was enforcing. \$param2\$  |
|   | Policy Enforcement | Execution allowed (inactive)                   | 841    | Warning  | Execution of file '\$filePathAndName\$' [\$hash\$] would have blocked if Cb Protection Agent was active.  |
| Δ | Policy Enforcement | Execution allowed (Trusted User)               | 815    | Notice   | Execution of unapproved file '\$filePathAndName\$' [\$hash\$] was allowed because of a Trusted User '\$username\$'.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.   |

|   | Type               | Subtype   | ID No. | Severity | Example Descriptions/Comments   |
|---|--------------------|---|--------|----------|---|
|   | Policy Enforcement | Execution allowed (Unanalyzed file loaded before service) | 846    | Warning  | The file '\$pathname\$\$pathSeparator\$\$filename\$' executed before the Cb Protection Agent started. The file was removed before the Cb Protection Agent could analyze it. \$param2\$  |
|   | Policy Enforcement | Execution block (banned file)                             | 802    | Notice   | File '\$filePathAndName\$' [\$hash\$] was blocked because it was banned.  |
| Δ | Policy Enforcement | Execution block (Custom Rule)                             | 806    | Notice   | File '\$filePathAndName\$' with hash [\$hash\$] was blocked because of a Custom Rule. Process '\$process\$' was terminated due to a Custom Rule.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.  |
|   | Policy Enforcement | Execution block (network file)                            | 805    | Notice   | The file '\$filePathAndName\$' [\$hash\$] was blocked because it was located on a remote drive.   |
|   | Policy Enforcement | Execution block (prompt timeout)                          | 839    | Info     | File '\$filePathAndName\$' with hash [\$hash\$] was blocked because of a timeout waiting for user response.   |
|   | Policy Enforcement | Execution block (removable media)                         | 819    | Notice   | File '\$filePathAndName\$' with hash [\$hash\$] was blocked from execution because it was on removable media.   |
|   | Policy Enforcement | Execution block (still analyzing)                         | 804    | Info     | File '\$filePathAndName\$' was blocked because Cb Protection Agent did not have time to analyze it.   |
|   | Policy Enforcement | Execution block (unapproved file)                         | 801    | Notice   | File '\$filePathAndName\$' [\$hash\$] was blocked because it was unapproved.  |
| Δ | Policy Enforcement | Execution prompt (Custom Rule)                            | 818    | Info     | File '\$filePathAndName\$' [\$hash\$] was executed because of a Custom Rule user response.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.  |
|   | Policy Enforcement | Execution prompt (unapproved file)                        | 814    | Info     | File '\$filePathAndName\$' [\$hash\$] was approved because of a user response.  |
|   | Policy Enforcement | Execution prompt allowed (unapproved file)                | 838    | Info     | File '\$filePathAndName\$' [\$hash\$] was approved because of a user response.  |
|   | Policy Enforcement | Execution prompt block (unapproved file)                  | 837    | Info     | File '\$filePathAndName\$' [\$hash\$] was blocked because of a user response.   |
|   | Policy Enforcement | File access error   | 825    | Warning  | Unable to access the file '\$filePathAndName\$'.  |
|   | Policy Enforcement | File approved (cache consistency)                         | 835    | Info     | File '\$filePathAndName\$' [\$hash\$] was approved due to cache a consistency scan.   |
| Δ | Policy Enforcement | File approved (Custom Rule)                               | 833    | Info     | File '\$filePathAndName\$' [\$hash\$] was approved due to Custom Rule.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.  |
|   | Policy Enforcement | File approved (local approval)                            | 813    | Info     | File '\$filePathAndName\$' [\$hash\$] was locally approved.   |
|   | Policy Enforcement | File approved (publisher)                                 | 812    | Info     | File '\$filePathAndName\$' [\$hash\$] was approved by Publisher '\$publisherName\$'.  |
| Δ | Policy Enforcement | File approved (Reputation)                                | 840    | Info     | File '\$filePathAndName\$' [\$hash\$] was approved by reputation.<br><b>Note:</b> This event occurs when an agent attempts to run an unapproved file, checks with the server, and is given a reputation approval from the server that was not previously sent to the agent.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0. |
|   | Policy Enforcement | File approved (system update)                             | 836    | Info     | File '\$filePathAndName\$' with hash [\$hash\$] was approved due to system update.<br><b>Note:</b> For Windows, this applies to the package/root files from Windows Update, not files installed from them.  |
| Δ | Policy Enforcement | File approved (Trusted User)                              | 810    | Info     | File '\$filePathAndName\$' [\$hash\$] was approved by Trusted User '\$username\$'.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.  |
| ✦ | Policy Enforcement | File approved (Unidesk)                                   | 850    | Info     | The file '\$pathname\$\$pathSeparator\$\$filename\$' [\$hash\$] was approved due to Unidesk read-only provisioning. '\$param1\$' '\$param2\$'   |
|   | Policy Enforcement | File approved (updater)                                   | 811    | Info     | File '\$filePathAndName\$' [\$hash\$] was approved by an Updater.   |

|        | Type               | Subtype                            | ID No. | Severity | Example Descriptions/Comments   |
|--------|--------------------|------------------------------------|--------|----------|---|
|        | Policy Enforcement | File approved (version resource)   | 834    | Info     | File '\$filePathAndName\$' [hash\$] was approved due to version resource.   |
| ■      | Policy Enforcement | File approved (Yara)               | 852    | Info     | The file '\$pathname\$\$pathSeparator\$\$filename\$' [hash\$] was approved due to yara rule(s). '\$param1\$' '\$param2\$'   |
|        | Policy Enforcement | Metered execution                  | 816    | Notice   | Metered file '\$filePathAndName\$' [hash\$] was executed by the user '\$username\$'.  |
| ◇      | Policy Enforcement | New file discovered on startup     | 845    | Warning  | The newly discovered file '\$pathname\$\$pathSeparator\$\$filename\$' [hash\$] was executing when the Cb Protection Agent started. \$param1\$<br><b>Change Note:</b> Prior to v8.0.0, the subtype was "Execution allowed (New file discovered on startup)".   |
|        | Policy Enforcement | Prompt canceled                    | 849    | Warning  | Prompt '\$filePathAndName\$' [hash\$] prompt is canceled (\$param1\$).<br><b>Note:</b> Param1 shows the reason a notifier prompt was cancelled. It can be one of the following: <ul style="list-style-type: none"> <li>EnforcementChange – Agent changed enforcement levels and the prompt no longer applies (e.g., moved from Medium to High, so the file will now just block).</li> <li>SubsequentBlock – Agent blocked the file and is no longer waiting for response (typically means timeout or file was banned or had a rule change the blocked it).</li> <li>AgentShutdown – System or daemon shutdown while the prompt was still outstanding. File will be blocked in this case.</li> <li>PingTimeout – Agent was unable to communicate with notifier and canceled the prompt. This is an error case and should be rare.</li> </ul> <b>Platform Note:</b> This event only occurs for Mac OS X and Linux agents. |
|        | Policy Enforcement | Read block (removable media)       | 821    | Notice   | Read access to file '\$filePathAndName\$' with hash [hash\$] was blocked because it was on removable media.   |
| △      | Policy Enforcement | Report access (Memory Rule)        | 829    | Info     | Access to process '\$filePathAndName\$' was granted – Requested[\$param1\$]<br><b>Note:</b> Param1 is a hex number indicating the Windows code of the permissions requested.<br><b>Change Note:</b> Capitalization of the subtype was changed in v8.1.0.  |
| △      | Policy Enforcement | Report execution (Custom Rule)     | 807    | Notice   | File '\$filePathAndName\$' [hash\$] was executed.<br>Process '\$process\$' failed to be terminated: \$param3\$. | ◇ | Session Management | User Role created          | 306    | Info     | User Role '\$param1\$' created by '\$username\$'.<br><b>Change Note:</b> Prior to v8.0.0, the event subtype and description referred to "User group".  |
| ◇ | Session Management | User Role deleted          | 307    | Info     | User Role '\$param1\$' deleted by '\$username\$'.<br><b>Change Note:</b> Prior to v8.0.0, the event subtype and description referred to "User group".  |
| ◇ | Session Management | User Role modified         | 308    | Info     | User Role '\$param1\$' modified by '\$username\$'.<br><b>Change Note:</b> Prior to v8.0.0, the event subtype and description referred to "User group".   |

## Section 2: Access to Event Data

In addition to the CB Protection Console user interface, event data is available in the following ways:

- as Syslog output, in one of four formats
- as CB Protection “external event logging” output
- as SQL views through the CB Protection “Live Inventory SDK”
- as JSON output to external analytics services
- in event archive files

### Syslog Formats

CB Protection supports integration of its event information with Syslog servers using several formats. You configure Syslog integration on the Events tab of the System Configuration page, described in the “System Configuration” chapter of the *CB Protection User Guide* or in online Help in the CB Protection Console. Upgrades from previous releases retain the format setting they had.

The supported formats are:

- **Basic (RFC3164)** – the default for upgrades from some previous releases
- **Enhanced (RFC5424)** – a newer standard; the default for new installations
- **CEF (HP ArcSight)** – the format to use to integrate CB Protection event logs with [HP ArcSight ESM](#) or [HP ArcSight Logger](#)
- **LEEF (IBM Q1 Labs)** – the format to use to integrate CB Protection event logs with [IBM Security QRadar Log Manager](#) or [IBM Security QRadar SIEM](#)

**Note:** Manually enabled, custom Syslog formatting will be overwritten on upgrade to this version of CB Protection. See “Setting Up External Event Logging” in the *CB Protection User Guide* for instructions on configuring the CB Protection Server for CEF syslog formatting.

### Basic and Enhanced Standard Syslog Formats

The fields available in Basic and Enhanced Standard Syslog formats are the same, except for three optional fields – App-Name, ProclD, and MsgID. [Table 4](#) shows the Basic and Enhanced Syslog format fields supported by CB Protection. Examples of messages in these formats are shown below the table.

**Table 4. CB Protection Event Mapping to Basic and Enhanced Syslog Formats**

| Syslog field          | Data Type     | Note   |
|-----------------------|---------------|--|
| Facility <sup>1</sup> | INTEGER       | Syslog facility, always “user-level”<br><b>Note:</b> Facility and Severity are coded into one number per Syslog specification.                               |
| Severity <sup>1</sup> | INTEGER       | Severity mapped from event severity (see <a href="#">Table 2</a> )<br><b>Note:</b> Facility and Severity are coded into one number per Syslog specification. |
| Version               | INTEGER       | (Enhanced Syslog only) Syslog version, by default “1”  |
| Timestamp             | DATETIME      | Timestamp when the Syslog event was sent (with the year and UTC time zone according to RFC 5424)   |
| Hostname              | NVARCHAR(256) | CB Protection Server hostname, appended by domain as per RFC 5424  |
| App-Name              | NVARCHAR(256) | (Enhanced Syslog only) Configurable value in ParityReporter.log.xml, by default “-”  |

| Syslog field |  | Data Type  | Note  |
|--------------|--|--|---|
| ProclD       |  | NVARCHAR(256)  | (Enhanced Syslog only) Configurable value in ParityReporter.log.xml, by default “-“   |
| MsgID        |  | NVARCHAR(256)  | (Enhanced Syslog only) Configurable value in ParityReporter.log.xml, by default “-“.  |
| Message      | Message field  |  | Message is a long text string beginning with <i>event:</i> ” and including all the “All messages” fields below inline; the message also can include some combination of the conditional fields.<br><b><i>Cb Protection Server event:text=“...” type=“...” ...</i></b> |
|              | Text   | NVARCHAR(2048)   | Event message (All messages)  |
|              | Type   | NVARCHAR(256)  | Event type name (All messages)  |
|              | subtype  | NVARCHAR(256)  | Event subtype name (All messages)   |
|              | hostname   | NVARCHAR(256)  | Event source – computer name or 'System' for CB Protection Server (All messages)  |
|              | username   | NVARCHAR(256)  | Name of user associated with the event (All messages)   |
|              | date   | DATETIME   | Event timestamp in UTC (All messages)   |
|              | ip_address   | VARCHAR  | IP address (IPv4 or IPv6) of the agent reporting the event (Conditional)  |
|              | process  | NVARCHAR(512)  | Process associated with the event (Conditional)   |
|              | file_path  | NVARCHAR(450)  | File path of the file associated with the event (Conditional)   |
|              | file_name  | NVARCHAR(450)  | Name of the file associated with the event (Conditional)  |
|              | file_hash  | CHAR(64)   | Hash of the file associated with the event (Conditional)  |
|              | installer_name   | NVARCHAR(450)  | Name of the Installer associated with the event (e.g., the installer that installed a newly discovered file) (Conditional)  |
|              | policy   | NVARCHAR(128)  | Name of the CB Protection policy for the agent associated with the event (Conditional)  |
|              | ban_name   | NVARCHAR(128)  | For files blocked due to bans, name of the ban (Conditional)  |
|              | rule_name  | NVARCHAR(256)  | Name of the rule associated with the event (Conditional)  |
|              | updater_name   | NVARCHAR(256)  | Name of the Updater associated with the event (Conditional)   |
|              | indicator_name   | NVARCHAR(256)  | Name of the threat indicator associated with the event; if present, same as rule_name (Conditional)   |
|              | server_version   | NVARCHAR(MAX)  | Version of the CB Protection Server associated with the event (All messages)  |
|              | file_trust   | -2 pending<br>-1 unknown<br>0-10 Trust value   | File trust from the Cb Collective Defense Cloud of the file associated with the event. Pending implies that FILE lookup was not yet performed but will be. (Conditional)  |
| file_threat  | -2 pending<br>-1 unknown<br>0 No threat<br>1 Potential risk<br>2 Malicious | File threat from Cb Collective Defense Cloud of the file associated with the event. Pending implies that Cb Collective Defense Cloud lookup was not yet performed but will be. (Conditional) |   |

| Syslog field                      | Data Type  | Note  |
|-----------------------------------|--|---|
| <b>Message fields (continued)</b> |  |   |
| <b>process_key</b>                | UID  |   |
| <b>process_trust</b>              | -2 pending<br>-1 unknown<br>0-10 Trust value                               | Unique proprietary key identifying the instance of the process on a specific computer   |
| <b>process_threat</b>             | -2 pending<br>-1 unknown<br>0 No threat<br>1 Potential risk<br>2 Malicious | Parent process trust from Cb Collective Defense Cloud of the file associated with the event. Pending implies that Cb Collective Defense Cloud lookup was not yet performed but will be. (Conditional) |
| <b>unified_source</b>             | NVARCHAR(256)  | Unified server that is the source of and event, if unified management is enabled and the source of an event. (Conditional; new in v8.0.0)   |

### Basic Syslog Format Message

The following is an example of Basic Syslog format:

```
16/06/16 13:42:48
Info message from: 123.45.67.8
Hostname: desktop8.mycorp.local
Cb Protection event: text="File 'c:\apps\alexainstaller.exe'
[07693beb9aaebdd8b3223a5becc25b44c70afd73cec9e4984ffc4e89624c5e17] was
executed for the first time." type="Discovery" subtype="First execution on
network" hostname="WORKGROUP\LAPTOP6" username="LAPTOP6\Administrator"
date="6/16/2016 1:42:48 PM" ip_address="fd70::a98b:d49b:e45f:cd30"
process="c:\windows\explorer.exe" file_path="c:\apps\alexainstaller.exe"
file_name="alexainstaller.exe"
file_hash="07693beb9aaebdd8b3223a5becc25b44c70afd73cec9e4984ffc4e89624c5e17"
policy="Test" process_key="00000000-0000-0574-01cf-86e9e504f7e6"
server_version="8.1.0.899" file_trust="0" file_threat="2" process_trust="10"
process_threat="0"
```

### Enhanced Syslog Format Message

The following is an example of Enhanced Syslog format:

```
16/06/16 14:38:37
Notice message from 123.45.67.8
Hostname: desktop8.mycorp.local
1 2016-06-16T14:38:37Z laptop6 - - - Cb Protection event: text="Computer
WORKGROUP\LAPTOP6 discovered new file 'c:\windows\temp\jvyyqbe4.dll'
[eeb0ada676b1f8e5e94015b5e48ed4bcf23959b0d0837bbd51c1870f5d641d2a]."
type="Discovery" subtype="New unapproved file to computer"
hostname="WORKGROUP\LAPTOP6" username="NT AUTHORITY\SYSTEM" date="6/16/2016

file_hash="eeb0ada676b1f8e5e94015b5e48ed4bcf23959b0d0837bbd51c1870f5d641d2a"
installer_name="csc.exe" policy="Test" process_key="00000000-0000-0bc4-01cf-
8970a7aca018" server_version="8.1.0.992" file_trust="-1" file_threat="-1"
```

## Mapping CB Protection Events to ArcSight CEF

CB Protection supports integration of its event information with Syslog servers using several formats. One of the Syslog formats supported is ArcSight CEF (Common Event Format), which you can use to integrate CB Protection event logs with ArcSight ESM or ArcSight Logger. You configure Syslog integration on the System Configuration/Events page, described in the “System Configuration” chapter of *Using CB Protection*.

This section describes the mapping of CB Protection event fields to ArcSight CEF fields. See your ArcSight documentation for full information about ArcSight CEF and its capabilities.

### Top-Level Syslog Format

**Table 5. CB Protection Event Mapping to Syslog ArcSight Common Event Format (RFC 3164 and ArcSight CEF)**

| Syslog field | Data Type     | Note   |
|--------------|---------------|--|
| Facility     | INTEGER       | Syslog facility; always “user-level”<br><b>Note:</b> Facility and Severity are coded into one number per Syslog specification.                               |
| Severity     | INTEGER       | Severity mapped from event severity (see <a href="#">Table 2</a> )<br><b>Note:</b> Facility and Severity are coded into one number per Syslog specification. |
| Timestamp    | DATETIME      | Timestamp when the Syslog event was sent (without the year, according to RFC 3164)   |
| Hostname     | NVARCHAR(256) | CB Protection Server hostname  |
| Message      |               | Message encoded according to ArcSight CEF specification  |

### Message Format

ArcSight CEF format uses the Syslog message protocol as a transport mechanism. The format of the message is:

```
Date-Time host CEF:Version|Device Vendor|Device Product|Device Version|
SignatureID|Name|Severity|Extension
```

Each message includes a common prefix consisting of the message date and time, the hostname of the server from which it was sent, and "CEF:" plus the version of CEF format. The remainder of the message is formatted into event-specific fields delimited by a bar ("|") character.

The following example illustrates a CEF-formatted message using Syslog output from CB Protection:

```
Sep 19 08:26:10 server3.mycorp.local CEF:0|Carbon Black|Protection
|8.1.0.899|801|Execution block (unapproved file)|5| dst=10.0.0.1
duser=NTAUTHORITY\SYSTEM msg=File 'itunessetup64.exe' has been blocked
because it was unapproved.
```

| Manager Receipt Time     | Device Receipt Time       | Device Event Category | Name                           | Device Severity | Device Event Class ID | External ID | Message  |

### CEF-CB Protection Mapping Tables

The tables below provide the following CEF-CB Protection mapping information:

- [Table 6](#) shows the mapping of CB Protection data to CEF Header fields
- [Table 7](#) shows the mapping of CB Protection data to CEF Extension field data
- [Table 8](#) shows CB Protection-specific custom extensions

**Table 6. Mapping of CB Protection Event Data to CEF Header Fields**

| CEF Prefix Field | CB Protection Value | Description   |
|------------------|---------------------|---|
| Host             | Hostname            | Hostname of the CB Protection Server providing the Syslog output.   |
| Version          | 0                   | CEF format version. By default this is 0.   |
| Device Vendor    | Carbon Black        | The company name of the syslog output provider.   |
| Device Version   | 8.1.8.xxx           | The version of product generating syslog output. The current CB Protection version is 8.1.8 and xxx represents the build number appended to the version.  |
| Device Product   | Protection          | The product name of the syslog output provider.   |
| SignatureID      | Event subtype ID    | Unique number for the event subtype as classified by CB Protection.   |
| Name             | Event subtype name  | Unique name for the event subtype as classified by CB Protection.   |
| Severity         | Event severity ID   | Numeric value indicating the severity of the event. CB Protection event severity ranges from 7 (least severe) to 0 (most severe). These are mapped to CEF severity levels, which range from 0 (least severe) to 10 (most severe). The CEF severity is calculated by subtracting the CB Protection severity from 9. This means that the most severe CB Protection event has a CEF severity of 9. The least severe CB Protection event has a CEF severity of 2. |
| Extension        | (varies)            | Additional event information. See <a href="#">Table 7</a> .   |

**Table 7. Mapping of CB Protection Event Data to CEF Extensions**

| CEF Extension Name   | CB Protection Event Field | Description   |
|--|---------------------------|---|
| externalId   | Event ID                  | Unique auto-incremented ID of each generated CB Protection event.   |
| DeviceEventCategory  | Event Type                | CB Protection event type  |
| startTime  | Event Timestamp           | Timestamp when the event was created on the endpoint (in UTC).  |
| ReceiptTime  | Event Received Timestamp  | Timestamp when the event was received by the CB Protection Server (in UTC).   |
| Message  | Event Description         | Full text message of the CB Protection event  |
| deviceHostName   | Server Hostname           | CB Protection Server host name. Note that this could be an IP address if that is what was entered during server installation. |
| destinationAddress *   | IP Address                | IPv4 address of the machine generating the event (if available).  |
| deviceCustomIPv6Address3 *   | IP Address                | Ipv6 address of the machine generating the event (if available).  |
| destinationHostName *  | Hostname                  | Host name of the machine generating the event.  |
| destinationUserName *  | Username                  | User name of the user generating the event.   |
| FileId *   | Antibody ID               | Unique (auto-incremented) ID of the file generating the event.  |
| filePath *   | File Path                 | Full pathname of the file generating the event.   |
| fileName *   | File Name                 | Filename of the file generating the event.  |
| fileHash *   | File Hash                 | SHA-256 file hash of the file generating the event.   |
| deviceProcessName *  | Process                   | Process name of the process generating the event.   |
| sourceProcessName  | Process Key               | Unique proprietary key identifying the instance of the process on a specific computer   |
| reason   | Indicator Name            | Name of the threat indicator associated with the event; if present, same as rule name (Conditional)                           |
| deviceExternalID   | Unified Source            | Name of the unified management server that is the source of an event (Conditional)  |
| * CEF Extensions with asterisks are context-dependent and not available on all events. |                           |   |

**Table 8. Mapping to Custom CEF Extensions**

| CEF Custom Extension & Label   | CB Protection Event Field | Description  |
|--|---------------------------|--|
| deviceCustomString1 *<br>deviceCustomString1Label = "rootHash"                   | Root Hash                 | Root hash of the file generating the event.  |
| deviceCustomString2 *<br>deviceCustomString2Label = "installerFilename"          | Installer Filename        | Installer Filename of the file generating the event.   |
| deviceCustomString3 *<br>deviceCustomString3Label = "policy"                     | Policy                    | CB Protection policy of the machine generating the event.  |
| deviceCustomString 4*<br>deviceCustomString4Label = "banName"                    | Ban Name                  | For a block event, the name of the ban (if any) that blocked the file; some bans are unnamed   |
| deviceCustomString 5*<br>deviceCustomString5Label = "ruleName"                   | Rule Name                 | The name of the rule associated with the event (if any)  |
| deviceCustomString 6*<br>deviceCustomString6Label = "updaterName"                | Updater Name              | The name of the Updater associated with the event (if any)   |
| deviceCustomFloatingPoint1 *<br>deviceCustomFloatingPoint1Label = "fileTrust"    | File Trust                | File trust from Cb Collective Defense Cloud of the file associated with the event. Pending means that Cb Collective Defense Cloud lookup was not yet performed but will be. (Conditional)<br>-2 pending<br>-1 unknown<br>0-10 Trust value                                      |
| deviceCustomFlexString1 *<br>deviceCustomFlexString1Label = "fileThreat"         | File Threat               | File threat from Cb Collective Defense Cloud of the file associated with the event. Pending means that Cb Collective Defense Cloud lookup was not yet performed but will be. (Conditional)"pending"<br>"unknown"<br>"0 - No threat"<br>"1 - Potential risk"<br>"2 - Malicious" |
| deviceCustomFloatingPoint2 *<br>deviceCustomFloatingPoint2Label = "processTrust" | Process Trust             | Parent process trust from Cb Collective Defense Cloud of the file associated with the event. Pending means that Cb Collective Defense Cloud lookup was not yet performed but will be. (Conditional)<br>-2 pending<br>-1 unknown<br>0-10 Trust value                            |

| CEF Custom Extension & Label   | CB Protection Event Field | Description  |
|--|---------------------------|--|
| deviceCustomFlexString2*<br>deviceCustomFlexString2Label<br>= "processThreat"      | Process Threat            | Parent process threat from Cb Collective Defense Cloud of the file associated with the event. Pending implies that Cb Collective Defense Cloud lookup was not yet performed but will be. (Conditional)<br>"pending"<br>"unknown"<br>"0 - No threat"<br>"1 - Potential risk"<br>"2 - Malicious" |
| * All CEF Custom Extensions are context-dependent and not available on all events. |                           |  |

## Mapping CB Protection Events to Q1Labs LEEF Format

One of the Syslog formats supported by CB Protection is Q1Labs LEEF (Log Event Extended Format), which you can use to integrate CB Protection event logs with QRadar SIEM or QRadar Log Manager. You configure Syslog integration on the System Configuration page Events tab in the CB Protection Console.

This section describes setup of QRadar Log Manager to accept CB Protection events, and the mapping of CB Protection event fields to Q1Labs LEEF fields. See your QRadar documentation for full information about QRadar and LEEF capabilities.

**Important:** If you are running **CB Protection version 8.1.0 or later**, you must update the **QRadar DSM** module for CB Protection to at least the **July 2017** version released by QRadar. This will enable QRadar to properly parse CB Protection 8.0- and 8.1-specific events. The previous DSM module for Bit9 Security Platform can still be used to integrate older versions of the Bit9 product with the QRadar.

### Configuring QRadar Log Manager

When a CB Protection Server begins to send events to the QRadar Log Manager, approximately the first 10 events will appear as "Unknown events". After that, QRadar Log Manager will auto-discover events as being from CB Protection, and will add a Log source definition for that CB Protection Server called "CbProtection @ CbServerComputerName" with the default QRadar Log Manager parameters.

To be certain you capture all events, set up CB Protection as a log source in QRadar Log Manager *before* integrating with the CB Protection Server.

### Manual Setup of CB Protection as Event Source

You can manually configure CB Protection as the source of events sent to the QRadar Log Manager.

#### To configure CB Protection as an event source for QRadar Log Manager:

1. In the QRadar Log Manager Console, click on the **Admin** tab.
2. On the console Admin settings, under Data Sources/Events, click **Log Sources**. The Log Sources window opens.
3. In the Log Source window menu bar, click **Add**. The Add a Log Source window opens.
4. In the new window, for Log Source Name, enter **Cb Protection**.
5. For Log Source Description, enter **Cb Protection Server**.
6. Choose **Cb Protection** on the Log Source menu.

7. For Log Source Identifier, enter the fully qualified domain name of the CB Protection Server sending the events.
8. Set Credibility to **10**.
9. Click the **Save** button.
10. On the QRadar Log Manager Admin console, click **Deploy Changes** in the Admin menu bar.

## Top-Level Syslog Format

---

**Table 9. CB Protection Event Mapping to Q1Labs Log Event Enhanced Format (RFC 3164 and Q1Labs LEEF)**

| Syslog field | Data Type     | Note  |
|--------------|---------------|---|
| Facility     | INTEGER       | Syslog facility; always “user-level”<br><b>Note:</b> Facility and Severity are coded into one number per Syslog specification.  |
| Severity     | INTEGER       | Severity mapped from CB Protection event severity (see <a href="#">Table 2</a> )<br><b>Note:</b> Facility and Severity are coded into one number per Syslog specification |
| Timestamp    | DATETIME      | Timestamp when the Syslog event was sent (without the year, according to RFC 3164)  |
| Hostname     | NVARCHAR(256) | CB Protection Server hostname   |
| Message      |               | Message encoded according to Q1Labs LEEF specification  |

## LEEF Format

---

Q1Labs LEEF format uses the Syslog message protocol as a transport mechanism. The format of the message is:

```
Date-Time hostname LEEF:Version|Vendor|Product|Version|EventID|
Key1=Value1<tab>Key2=Value2<tab>...<tab>KeyN=ValueN
```

Each message includes a common prefix consisting of the message date and time, the hostname of the server from which it was sent, and "LEEF:" plus the version of LEEF format. Following the prefix, the message includes fields describing the product sending the message and an event identifier. The remainder of the message is formatted into an event-specific series of key value pairs delimited by a tab character. Characters in the message are UTF-8 encoded.

The following example illustrates a LEEF-formatted message using Syslog output from CB Protection, with “<tab>” substituted where actual tabs are used in the message:

```
Jan 18 11:07:53 198.76.5.4 LEEF:1.0|Carbon_Black|Protection|
8.1.0.978<tab>|NEW_PORT_DISCOVERD|src=172.5.6.67<tab>dst=172.50.123.1<tab>
sev=5<tab>cat=anomaly<tab>msg=there are spaces in this message
```

## CB Protection-to-LEEF Mapping Tables

---

The tables below provide the following LEEF-CB Protection mapping information:

- [Table 10](#) shows the mapping of CB Protection event data to LEEF Header fields
- [Table 11](#) shows the mapping of CB Protection events to LEEF Attributes

**Table 10. Mapping of CB Protection Event Data to LEEF Header Fields**

| LEEF Prefix Field | CB Protection Value | Description   |
|-------------------|---------------------|---|
| Hostname          | Hostname            | Hostname of the CB Protection Server providing the Syslog output  |
| LEEF Version      | 1.0                 | LEEF format version. By default this is 1.0.  |
| Vendor            | Carbon Black        | The company name of the Syslog output provider.   |
| Product*          | Protection          | The name of the product generating Syslog output.   |
| Version           | 8.1.10.xxx          | The version of the product generating Syslog output, including the build number (represented here by “xxx”). The current CB Protection version is 8.1.10. |
| EventID           | Event subtype name  | Unique name identifying the event subtype as classified by CB Protection.   |
| Attributes        | (varies)            | See <a href="#">Table 11</a> .  |

**Table 11. Mapping of CB Protection Event Fields to LEEF Attributes**

| LEEF Attribute (name in RAW view) | LEEF Property (Visible name in Console) | Regular Expression (to Extract) | CB Protection Event Field | Description   |
|-----------------------------------|---|---------------------------------|---------------------------|---|
| cat                               | Category                                |                                 | Event Type                | CB Protection event category name   |
| sev                               | Severity                                |                                 | Severity                  | Severity of the CB Protection event. Mapped from CB Protection range 7-0 (0 is most important) into LEEF range 1-10 (10 = most important) |
| devTime                           | Device Time                             |                                 | Event Timestamp           | Timestamp (UTC) when CB Protection event was generated; Converted to local time when displayed as “Log Source Time” in QRadar events view |
| receivedTime <sup>1</sup>         | Received Time                           | receivedTime=([^\t+])[\t]*      | Received Time             | Timestamp (UTC) when the event was received by the CB Protection Server   |
| msg <sup>1</sup>                  | Message                                 | msg=([^\t+])[\t]*               | Event Description         | Full message describing the event   |
| externalID <sup>1</sup>           | External ID                             | externalId=([^\t+])[\t]*        | Event Id                  | Unique identifier of the event instance   |
| src <sup>2</sup>                  | Source Address                          |                                 | Ip Address                | IP (IPv4) address of the computer generating the event  |
| srcHostName <sup>1,2</sup>        | Source Hostname                         | srcHostName=([^\t+])[\t]*       | Hostname                  | Hostname of the computer generating the event   |

| LEEF Attribute (name in RAW view) | LEEF Property (Visible name in Console) | Regular Expression (to Extract) | CB Protection Event Field | Description  |
|-----------------------------------|---|---------------------------------|---------------------------|--|
| srcProcess <sup>1,2</sup>         | Source Process                          | srcProcess=([\t+])[\t]*         | Process                   | Name of the process generating the event   |
| usrName <sup>2</sup>              | Username                                |                                 | Username                  | Username of the user generating the event  |
| filePath <sup>1,2</sup>           | File Path                               | filePath=([\t+])[\t]*           | File Path                 | Full path of the file generating the event   |
| fileName <sup>1,2</sup>           | Filename                                | fileName=([\t+])[\t]*           | File Name                 | Filename of the file generating the event  |
| fileHash <sup>1,2</sup>           | File Hash                               | fileHash=([\t+])[\t]*           | File Hash                 | SHA256 hash of file generating the event   |
| fileId <sup>1,2</sup>             | File ID                                 | fileId=([\t+])[\t]*             | Antibody Id               | Unique identifier of file generating the event   |
| rootHash <sup>1,2</sup>           | Root Hash                               | rootHash=([\t+])[\t]*           | Root Hash                 | Root hash of the file generating the event   |
| installerFileName <sup>1,2</sup>  | Installer Filename                      | installerFileName=([\t+])[\t]*  | Installer Filename        | Installer filename of the file generating the event  |
| banName <sup>1,2</sup>            | Ban Name                                | banName=([\t+])[\t]*            | Ban Name                  | For block events, name of the ban that blocked the file.<br><b>Change Notes:</b> This was “ruleName” prior to 7.0.1 Patch 3. |
| ruleName <sup>1,2</sup>           | Rule Name                               | ruleName=([\t+])[\t]*           | Rule Name                 | Name of the rule associated with the event (if any)  |
| updaterName <sup>1,2</sup>        | Updater Name                            | updaterName=([\t+])[\t]*        | Updater Name              | Name of the Updater associated with the event (if any)   |
| indicatorName                     | indicatorName                           | indicatorName=([\t+])[\t]*      | Indicator Name            | Name of the threat indicator associated with the event (if any)  |
| policy <sup>1,2</sup>             | Policy                                  | policy=([\t+])[\t]*             | Policy                    | CB Protection Policy of the computer generating the event  |
| dstHostName <sup>1</sup>          | Destination Hostname                    | dstHostName=([\t+])[\t]*        | Hostname                  | CB Protection Server computer receiving the event  |

| unifiedSource                           | Unified Source                                | unifiedSource=([^\t+)]\t)*         | Unified Server Source            | Hostname of the Unified Server (if implemented) that is the source of an event  |

| LEEF Attribute<br>(name in RAW<br>view)   | LEEF Property<br>(Visible name<br>in Console) | Regular Expression<br>(to Extract) | CB Protect<br>ion Event<br>Field | Description |
|---|---|------------------------------------|----------------------------------|-------------|
| <sup>1</sup> These are custom LEEF attributes for CB Protection event fields with no predefined attribute name in LEEF. You must use the regular expressions next to each of these items to extract it as a custom attribute. See <a href="#">Manual Setup of CB Protection Custom Properties</a> for instructions. |   |                                    |                                  |             |
| <sup>2</sup> These LEEF Extensions are context-dependent and not available on all events.   |   |                                    |                                  |             |

## ***Manual Setup of CB Protection Custom Properties***

For the current release of QRadar Log Manager, manual setup is required to parse certain CB Protection properties. [Table 11](#) shows the regular expressions that must be used to parse each custom property.

### **To configure custom properties for QRadar Log Manager:**

1. On the QRadar Log Manager, click the **Admin** tab and then click **Custom Event Properties** in the Data Sources/Events section. The Custom Event Properties window opens.
2. Click **Add** in the Custom Event Properties window menu bar. The Event Property Definition window opens.
3. In the Event Property Definition window, click the **New Property** radio button, and in the New Property text box, enter a LEEF Property name from [Table 11](#) (such as “Message”).
4. Choose **Cb Protection** on the Log Source Type menu.
5. Enter the regular expression from [Table 11](#) corresponding to the property you chose (such as “`msg=([^\t]+)[\t]*`”).
6. Make sure that the **Enabled** box is checked, and then click the **Save** button.
7. Repeat the steps above for each CB Protection custom property (those with regular expressions) listed in [Table 11](#).
8. On the Admin console, click **Deploy Changes** in the Admin menu bar.

## External Event Database

You can send events from the CB Protection Server to an external database. The following table describes the external events table columns.

**Table 12. CB Protection External Event Database Columns**

| External table column | Data Type      | Note  |
|-----------------------|----------------|---|
| event_id              | BIGINT         | ID of the event   |
| time                  | DATETIME       | Time when event occurred (in UTC)   |
| received_time         | DATETIME       | Time when server received the event (in UTC)  |
| severity              | NVARCHAR(256)  | Event severity  |
| priority              | NVARCHAR(256)  | Event severity; note that priority was used in pre-7.2.1 releases, and is deprecated for 7.2.1 and later. The preferred name is "severity".   |
| type                  | NVARCHAR(256)  | Event type name   |
| subtype               | NVARCHAR(256)  | Event subtype name  |
| text                  | NVARCHAR(1024) | Event description   |
| hostname              | NVARCHAR(128)  | Event source (computer name or 'system')  |
| host_id               | INTEGER        | ID of the event source (computer ID or 0 for 'system')  |
| ip_address            | VARCHAR(40)    | IP address associated with the event  |
| platform              | NVARCHAR(64)   | Platform of the computer associated with the event (Windows, Mac, Linux)  |
| hostgroup             | NVARCHAR(512)  | Name of the policy associated with the event  |
| hostgroup_id          | INTEGER        | ID of the policy associated with the event  |
| username              | NVARCHAR(512)  | Name of user associated with the event  |
| process               | NVARCHAR(512)  | Name of the process associated with the event   |
| filename              | NVARCHAR(1024) | Full file path  |
| hash                  | CHAR(64)       | File hash (sha256)  |
| tail_filename         | NVARCHAR(256)  | Truncated file name (max. 256 characters)   |
| roothash              | CHAR(64)       | Installer hash (sha256)   |
| rootname              | NVARCHAR(1024) | Installer name associated with the event  |
| ieid                  | INTEGER        | Installer ID associated with the event  |
| ban_name              | NVARCHAR(128)  | For blocked file events, the name of the ban that blocked the file action; some bans are unnamed  |
| rule_name             | NVARCHAR(128)  | Name of the rule associated with the event (if any)   |
| updater_name          | NVARCHAR(256)  | Name of the Updater associated with the event (if any)  |
| parent_id             | INTEGER        | Not used  |
| indicator_name        | NVARCHAR(128)  | Name of the threat indicator associated with the event (if any)   |
| process_key           | NVARCHAR(128)  | Unique proprietary key identifying the instance of the process on a specific computer   |
| file_trust            | INTEGER        | File trust from Cb Collective Defense Cloud of the file associated with the event. Pending means that file lookup was not yet performed but will be. (Conditional)<br><b>-2 pending</b><br><b>-1 unknown</b><br><b>0-10 Trust value</b> |

|   | External table column      | Data Type       | Note   |
|---|----------------------------|-----------------|--|
|   | file_threat                | INTEGER         | File threat from Cb Collective Defense Cloud of the file associated with the event. Pending means that file lookup was not yet performed but will be. (Conditional)<br><b>-2 pending</b><br><b>-1 unknown</b><br><b>0 No threat</b><br><b>1 Potential risk</b><br><b>2 Malicious</b>           |
|   | process_trust              | INTEGER         | Parent process trust from Cb Collective Defense Cloud of the file associated with the event. Pending means that file lookup was not yet performed but will be. (Conditional)<br><b>-2 pending</b><br><b>-1 unknown</b><br><b>0-10 Trust value</b>  |
|   | process_threat             | INTEGER         | Parent process threat from Cb Collective Defense Cloud of the file associated with the event. Pending means that file lookup was not yet performed but will be. (Conditional)<br><b>-2 pending</b><br><b>-1 unknown</b><br><b>0 No threat</b><br><b>1 Potential risk</b><br><b>2 Malicious</b> |
| ✦ | process_hash               | CHAR (64)       | Hash of the process associated with the event  |
| ✦ | command_line               | NVARCHAR (1024) | Command line in the event description. Command lines may include proprietary information (e.g., passwords), and so their inclusion in events is optional. (Conditional)  |
| ✦ | unified_source             | NVARCHAR (256)  | In a Unified Management environment, the server that initiated an action. (Conditional)  |
| ✦ | New or changed for v8.0.0. |                 |  |

## Live Inventory SDK

CB Protection includes public views into its “live inventory” database of files, assets and events. You can create your own reporting and data analysis solutions through the use of these public views. The schema for these public views is **bit9\_public** and the view for events is **ExEvents**.

Please refer to “Appendix A. Live Inventory SDK: Database Views” in the *Using CB Protection* guide or online Help in the CB Protection Console for more details.

## Event Output for External Analytics

A CB Protection Server can be configured to send data, including CB Protection event data, to external data analytics tools, such as Splunk. Data exported for external analytical tools is in JSON format. It includes the field name with each value, making it easier both to view the raw output and to parse it later without creating indexing dependencies.

Please refer to “Exporting Data for External Analysis” in the *Using CB Protection* guide or online Help in the CB Protection Console for more details.

## Archive Files

You can choose to have the CB Protection Server export a daily archive of events to a GZIP-compressed CSV file named in the format `yyyy-mm-dd.csv.gz`. To enable this feature, go to the Events tab of the System Configuration page, click Edit, check the Archive Events Enabled box, and click Update. The location of these archive files is in a subfolder of the server installation directory, by default:

```
C:\Program Files (x86)\Bit9\Parity Server\archivelogs\
```

The following table describes the columns in these archive files.

**Table 13. Event Archive CSV File Columns**

|   | Archive CSV column         | Note  |
|---|----------------------------|---|
|   | <b>TIMESTAMP</b>           | Time event occurred on agent (in UTC)   |
|   | <b>RECEIVEDTIMESTAMP</b>   | Time event was received on server (in UTC)  |
|   | <b>EVENTTYPE</b>           | Event type name   |
|   | <b>EVENTSUBTYPE</b>        | Event subtype name  |
|   | <b>COMPUTER</b>            | Event source (computer name or 'System')  |
| + | <b>COMPUTER_ID</b>         | Event source (Unique numeric ID, 0 for 'system')  |
|   | <b>PLATFORM</b>            | Platform of the computer associated with the event  |
|   | <b>IP_ADDRESS</b>          | IP address associated with the event  |
|   | <b>MESSAGE</b>             | Event description   |
|   | <b>POLICY</b>              | Name of the policy associated with the event  |
|   | <b>FILENAME</b>            | Full file path  |
|   | <b>PROCESSNAME</b>         | Name of the process associated with the event   |
|   | <b>HASH</b>                | File hash   |
|   | <b>HASH_TYPE</b>           | Type of the file hash (2 = SHA1, 3=MD5, 5=Sha256, 6=MSI)  |
|   | <b>INSTALLER_HASH</b>      | Installer hash  |
|   | <b>INSTALLER_HASH_TYPE</b> | Type of the installer hash (2 = SHA1, 3=MD5, 5=Sha256, 6=MSI)   |
|   | <b>RULE_NAME</b>           | Name of the rule associated with the event (if any)   |
|   | <b>RULE_TYPE</b>           | Rule type of the rule associated with the event   |
|   | <b>BAN_NAME</b>            | For blocked file events, the name of the ban that blocked the file action; some bans are unnamed  |
|   | <b>UPDATER_NAME</b>        | Name of the Updater associated with the event (if any)  |
|   | <b>SEVERITY</b>            | Event severity<br><b>Change Notes:</b> This column was labeled "priority" in pre-7.2.1 releases   |
|   | <b>USERNAME</b>            | Name of user associated with the event  |
|   | <b>PROCESS_HASH</b>        | Hash of the process associated with the event   |
|   | <b>PROCESS_HASH_TYPE</b>   | Hash type of the process associated with the event  |
|   | <b>ROOT_NAME</b>           | Installer name associated with the event  |
|   | <b>GLOBAL_STATE</b>        | Global state of the file associated with the event (Approved/Unapproved)  |
|   | <b>INDICATOR_NAME</b>      | Name of the threat indicator associated with the event (if any)   |
|   | <b>FILE_TRUST</b>          | File trust from Cb Collective Defense Cloud of the file associated with the event. Pending means that file lookup was not yet performed but will be.<br>(Conditional)<br><b>-2 pending</b><br><b>-1 unknown</b> |

| Archive CSV column           | Note   |
|------------------------------|--|
|                              | <b>0-10 Trust value</b>  |
| <b>FILE_THREAT</b>           | File threat from Cb Collective Defense Cloud of the file associated with the event. Pending means that file lookup was not yet performed but will be. (Conditional)<br><b>-2 pending</b><br><b>-1 unknown</b><br><b>0 No threat</b><br><b>1 Potential risk</b><br><b>2 Malicious</b>             |
| <b>PROCESS_TRUST</b>         | Parent process trust from Cb Collective Defense Cloud of the file associated with the event. Pending means that file lookup was not yet performed but will be. (Conditional)<br><b>-2 pending</b><br><b>-1 unknown</b><br><b>0-10 Trust value</b>  |
| <b>PROCESS_THREAT</b>        | Parent process threat from Cb Collective Defense Cloud of the file associated with the event. Pending implies that file lookup was not yet performed but will be. (Conditional)<br><b>-2 pending</b><br><b>-1 unknown</b><br><b>0 No threat</b><br><b>1 Potential risk</b><br><b>2 Malicious</b> |
| <b>USAGE_COUNTER</b>         | Prevalence of file related to this event   |
| <b>PROCESS_USAGE_COUNTER</b> | Prevalence of parent process related to this event   |
| ✦ <b>PROCESS_KEY</b>         | Unique proprietary key identifying the instance of the process on a specific computer  |
| ✦ <b>COMMAND_LINE</b>        | Command line in the event description. Command lines may include proprietary information (e.g., passwords), and so their inclusion in events is optional.  |
| ✦ <b>UNIFIED_SOURCE</b>      | In a Unified Management environment, the server that initiated an action.  |
| ✦ New or changed for v8.0.0. |  |

## Contacting Carbon Black Support

---

Please view our Customer Support Guide on the User Exchange for more information about Technical Support:

<https://community.carbonblack.com/t5/Support-Zone/Guide-to-Carbon-Black-Customer-Support/tap/34324>

For your convenience, support for CB Protection is available through several channels:

| Technical Support Contact Options  |
|--|
| Web: <a href="#">User Exchange</a>   |
| E-mail: <a href="mailto:support@carbonblack.com">support@carbonblack.com</a> |
| Phone: 877.248.9098  |
| Fax: 617.393.7499  |

## Reporting Problems

---

When you call or e-mail technical support, please provide the following information to the support representative:

| Required Information          | Description  |
|-------------------------------|--|
| <b>Contact</b>                | Your name, company name, telephone number, and e-mail address  |
| <b>Product version</b>        | Product name (for example, CB Protection Server or Agent) and version number   |
| <b>Hardware configuration</b> | Hardware configuration of the server or endpoint having the issue (processor, memory, and RAM)   |
| <b>Document version</b>       | For documentation issues, specify the version of the manual you are using. The date and version of the document appear on the cover page of most documents and after the Copyrights and Notices section of longer manuals. |
| <b>Problem</b>                | Action causing the problem, error message returned, and event log output (as appropriate)  |
| <b>Problem severity</b>       | Critical, serious, minor, or enhancement   |
